Complex Service Orchestration with OSM and OpenStack

Mini-Project Final Presentation

Goals

- Build and deploy a complex service in virtual environment using...
 - Open Source MANO (OSM)
 - OpenStack
 - Ubuntu Cloud Image
 - Cloud-init
- Experiment with **Service Function Chaining: VNF Forwarding Graph**

Scenario

Demo

Demo

1. OSM Dashboard (Orchestrator)

- Descriptors, Graphs
- Service instantiation workflow

Demo

1. **OSM Dashboard** (Orchestrator)

- Descriptors, Graphs
- Service instantiation workflow

2. **OpenStack Dashboard** (Infrastructure Manager)

- Running instances, Logs
- IP of instances

Demo

1. **OSM Dashboard** (Orchestrator)

- Descriptors, Graphs
- Service instantiation workflow

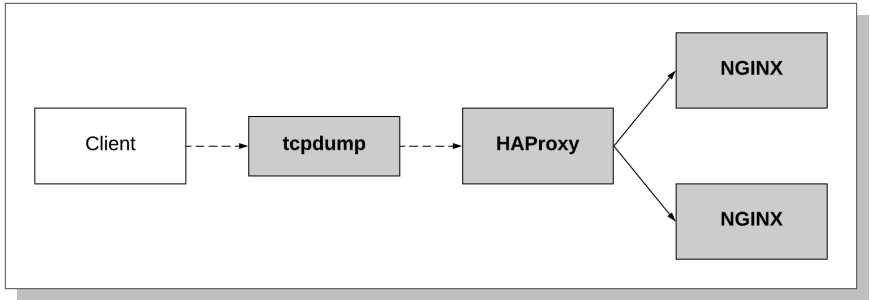

2. **OpenStack Dashboard** (Infrastructure Manager)

- Running instances, Logs
- IP of instances

3. **Testing Scenario**

- SSH into running instances
- curl the load balancer
- **SFC Demo:** tcpdump

Demo

- SSH into running instances
- curl the load balancer
- **SFC Demo:** tcpdump

Issues?

Issues

1. SFC chaining not working from OSM

- VNFFG description not stable in OSM
- What I tried
 - OSM Release 5, 6, Master
 - OpenStack newton, ocata, queens
 - Different NSD, VNFD (Intern Project)

Issues

1. SFC chaining not working from OSM

- VNFFG description not stable in OSM
- What I tried
 - OSM Release 5, 6, Master
 - OpenStack newton, ocata, queens
 - Different NSD, VNFD (Intern Project)

2. VNF Configuration using “Charms”

- OSM Provides post instantiation configuration
- Node IP configuration on HAProxy is now static
